## Installation Bid Requests

This is a list of the information a landscape contractor **MUST HAVE** to efficiently fill out an installation bid. **THE MORE ACCESSIBLE THIS INFORMATION IS, THE MORE ACCURATE AND CONSISTENT THE BIDS WILL BE.**

### General

- Date you need a response by
- Dates you want the installation started and completed
- Project name
- Location of installation
- Description of truck access to the site
- Contractor qualifications required
- Planting plan/drawing (this is the best place to include most of this information)
- Installation specifications including all material specifications

### Soils and materials

- Soil type (general description: clay, sand, silt, loam, rocky, bedrock)
- Soil compaction level (what is the site history?)
- Any mulching required (include material, depth, acreage, and describe dump truck access)
- Any seeding required (include seed mixture, application rate, acreage to be seeded)
- Special materials (staking, flagging)
- Plant list, including species, size, quantity, comments, limit on genetic origin

### Other work

- Any pre-installation weed removal required including species, coverage, height (if blackberries), and method of removal
- Maintenance required (if part of contract)

All of the above information should be **CLEARLY** indicated within the restoration/mitigation plan or the bid package provided to the landscape contractor bidding on the job. If a plan or bid package is not available for the project or you only have a drawing, you can use the attached form to give potential bidders enough information to bid on the project. If the project is based on a mitigation report, including a copy of the report will help potential bidders understand the project.
